

Nuvista WIFI Scanner Application for Netsuite

- WIFI Scanner Application for Netsuite is designed to support the data collection needs of warehouse operations ranging from Purchase Order receiving process to Customer Order fulfilment to Stock Take..
- WIFI Scanner Application is a comprehensive and robust data collection system that simplifies operations by streaming real-time information between the warehouse and Netsuite ERP.
- WIFI Scanner Application handles all communications with your Netsuite ERP system. Users select transactions and scan bar-coded data by using hand-held radio frequency (RF) scanners. Warehouse Mobility formats the data and transmits it to your Netsuite ERP system. Any feedback from Netsuite ERP is presented to the user exactly as it was received.
- With WIFI Scanner Application, users work with data-entry screens that show only relevant data fields, many of which are pre-populated with default values. It updates your Netsuite ERP database with the same data integrity as transactions that you enter through the standard ERP user interface at a desktop terminal.

Benefits

- **Automated Data Collection**-It automates the data collection from receiving to shipping and everything in between. While automating the data collection process and eliminating human errors, it actually simplifies your business processes by cutting down the number of steps to collect data.
- **Real Time** – the WIFI scanner application updates all the NetSuite ERP records real time and also provides users with feedback all in real time.
- **Reduced time in handling transactions** –Automation of data collection from receiving to shipping, results in reduced time to receive and ship material by almost 30%.
- **Improved Inventory Accuracy** –With stock take process on scanner, it allows users to perform Inventory count by scanning the barcode and update quantities to be adjusted to improve Inventory accuracy.
